

Tips and useful links

During the talk, we discussed some aspects of creating your website and talked about some useful links:

1) Validating your HTML code is important and can be done using this website: <https://validator.w3.org/>

2) TU Delft students/employees using Windows might consider using the homepage.tudelft domain: <https://homepage.tudelft.nl/8u51q/>

3) For putting equations in HTML code, we refer to MathJax: <https://en.wikipedia.org/wiki/MathJax>

4) Checking the speed of your website can be done easily using: <https://developers.google.com/speed/pagespeed/insights/?hl=nl>

5) A final hint: You can use the inspect command (rightbutton click + Inspect) to check out the HTML code used to create a certain website!

Good luck creating your own website!
